次の英文（**“What Volunteers Gain”**）を読んで、あとの問いに答えなさい。

Volunteer work is often seen as something we do only for others. People clean parks, help at events, or visit elderly people without being paid. It is easy to think that volunteers give their time and get nothing back.

In fact, volunteers often gain a great deal. For example, a high school student who helps at a local festival may learn how to work in a team and how to talk with adults she has never met. These are skills that are hard to learn in a classroom.

Volunteering can also help young people discover what they want to do in the future. A student who reads picture books to children at a library might realize that she enjoys teaching. Experiences like this can guide students when they choose a career.

Thus, volunteer work is not a one-way gift. When we help others, we also help ourselves grow. Students who are looking for new experiences should consider volunteering in their communities.

イ　How to cook festival food.

ウ　How to read picture books.

エ　How to work in a team and talk with adults.

次の英文（**“Mistakes as Teachers”**）を読んで、あとの問いに答えなさい。

Many students are afraid of making mistakes. In class, they stay quiet because they do not want to give a wrong answer in front of others. They feel that a mistake shows they are not smart.

However, mistakes are an important part of learning. When we make a mistake, we find out exactly what we do not understand yet. For example, if you get a math problem wrong and check each step, you can see where your thinking went off track. The next time, you are much less likely to make the same mistake.

This is true outside school as well. Athletes watch videos of their failed plays, and scientists learn from experiments that do not work. In both cases, people improve by looking carefully at what went wrong.

Therefore, we should change the way we think about mistakes. A mistake is not proof that we are not smart; it is information that shows us how to improve. If we are willing to make mistakes and learn from them, we will grow faster.

次の英文（**“Why Buy When You Can Borrow?”**）を読んで、あとの問いに答えなさい。

Think about the things in your home that you rarely use. Many families own a drill, a tent, or a large cooking pot that they use only once or twice a year. These items take up space and cost money, but most of the time they just sit in a closet.

Because of this, some communities have started "libraries of things." Like a book library, these places lend items to members for a short time. For example, a family that wants to go camping can borrow a tent instead of buying one.

Sharing items in this way has several benefits. People save money and space at home. Also, if fewer items are produced, fewer resources are used, which is better for the environment.

To sum up, we do not always need to own everything we use. By borrowing and sharing, we can live more simply and protect the environment at the same time.

次の英文（**“Gardens That Grow Communities”**）を読んで、あとの問いに答えなさい。

In many cities, people live close to one another but rarely talk with their neighbors. Some people do not even know the names of the people next door. How can city residents build stronger connections?

One answer is a community garden. In a community garden, people who live in the same area share a piece of land and grow vegetables and flowers together. While they are working, they naturally start talking about the weather, their plants, and their daily lives. As a result, people who were once strangers can become friends.

Community gardens also help in other ways. Children can learn where food comes from, and older people can share their knowledge of farming. In addition, the gardens make the area greener and more beautiful.

Of course, a garden needs time and care, and not everyone has free time. Still, even a small garden can bring people together. Working side by side with our neighbors may be one of the simplest ways to make a city feel like home.

次の英文（**“Libraries Are More Than Books”**）を読んで、あとの問いに答えなさい。

When people think of a library, they usually imagine a quiet room full of books. For a long time, that image was correct. Libraries were mainly places to borrow books and study in silence.

Today, however, many libraries are changing. Some offer free Internet access for people who do not have it at home. Others hold events such as language classes, computer lessons, and story time for small children. In some libraries, there are even rooms where people can talk and work together on projects.

Why are libraries changing in this way? One reason is that people can now find a lot of information online. To stay useful, libraries have started to offer services that people cannot easily get elsewhere.

In other words, libraries are becoming community centers where people can learn and meet. Books are still important, but a modern library is also a place that connects people with information and with one another.

次の英文（**“The Power of Reading Aloud”**）を読んで、あとの問いに答えなさい。

Most students read English silently. They move their eyes across the page and try to understand the meaning. This is an important skill, but there is another way of reading that is often forgotten: reading aloud.

Reading aloud helps learners in several ways. First, it makes them pay attention to the sounds of words and the rhythm of sentences. Second, saying sentences out loud many times helps them remember useful expressions. As a result, many learners find it easier to speak and listen.

However, reading aloud is not effective if learners do not understand what they are reading. Simply making sounds without thinking about the meaning does not help much. Learners should first understand the text and then read it aloud.

In conclusion, reading aloud is a simple but powerful way to improve English. If learners understand a text first and then read it aloud again and again, they can build skills that silent reading alone cannot give them.

次の英文（**“Why Boredom Can Be Good for Us”**）を読んで、あとの問いに答えなさい。

Most of us try hard to avoid boredom. When we have a few free minutes, we take out our phones and look for something to watch or read. Being bored feels like a waste of time, so we fill every empty moment. But is boredom really something we should run away from?

Some people say that boredom actually helps us think in new ways. When there is nothing to hold our attention, our minds begin to wander. We start to remember past events, imagine the future, and connect ideas that seem unrelated. For example, many people say they get their best ideas while taking a shower or waiting for a bus, moments when they have nothing else to do.

However, this does not mean that all boredom is useful. If a student feels bored in every class for months, it may be a sign that something needs to change. Long-lasting boredom can lower our motivation and make us feel unhappy.

In short, a little boredom is not our enemy. Instead of reaching for our phones every time we have nothing to do, we can sometimes let our minds wander. Those quiet moments may give us the space we need to think creatively.

次の英文（**“The Bicycle: A Small Answer to Big Problems”**）を読んで、あとの問いに答えなさい。

Every morning, roads in many cities are full of cars. Traffic jams waste people's time, and the exhaust from cars makes the air dirty. City governments are looking for ways to solve these problems.

One simple solution is to encourage people to ride bicycles. Bicycles do not need fuel, so they do not produce exhaust. They also take up much less space than cars, so more people can travel on the same road. In addition, riding a bicycle is good exercise.

On the other hand, cycling in a city can be dangerous if there are no safe lanes for bicycles. Bad weather and long distances can also make cycling difficult. For these reasons, some people hesitate to choose bicycles.

Therefore, cities need to do more than simply tell people to ride bicycles. If they build safe bicycle lanes and places to park bicycles, more people will feel comfortable cycling. In this way, a small change in how we travel can help with big problems.

Therefore, cities need to do more than simply tell people to ride bicycles. If they build safe bicycle lanes and places to park bicycles, more people will feel comfortable cycling. In this way, a small change in how we travel can help with big problems.

次の英文（**“Mistakes as Teachers”**）を読んで、あとの問いに答えなさい。

Many students are afraid of making mistakes. In class, they stay quiet because they do not want to give a wrong answer in front of others. They feel that a mistake shows they are not smart.

However, mistakes are an important part of learning. When we make a mistake, we find out exactly what we do not understand yet. For example, if you get a math problem wrong and check each step, you can see where your thinking went off track. The next time, you are much less likely to make the same mistake.

This is true outside school as well. Athletes watch videos of their failed plays, and scientists learn from experiments that do not work. In both cases, people improve by looking carefully at what went wrong.

Therefore, we should change the way we think about mistakes. A mistake is not proof that we are not smart; it is information that shows us how to improve. If we are willing to make mistakes and learn from them, we will grow faster.

次の英文（**“Libraries Are More Than Books”**）を読んで、あとの問いに答えなさい。

When people think of a library, they usually imagine a quiet room full of books. For a long time, that image was correct. Libraries were mainly places to borrow books and study in silence.

Today, however, many libraries are changing. Some offer free Internet access for people who do not have it at home. Others hold events such as language classes, computer lessons, and story time for small children. In some libraries, there are even rooms where people can talk and work together on projects.

Why are libraries changing in this way? One reason is that people can now find a lot of information online. To stay useful, libraries have started to offer services that people cannot easily get elsewhere.

In other words, libraries are becoming community centers where people can learn and meet. Books are still important, but a modern library is also a place that connects people with information and with one another.

次の英文（**“What Volunteers Gain”**）を読んで、あとの問いに答えなさい。

Volunteer work is often seen as something we do only for others. People clean parks, help at events, or visit elderly people without being paid. It is easy to think that volunteers give their time and get nothing back.

In fact, volunteers often gain a great deal. For example, a high school student who helps at a local festival may learn how to work in a team and how to talk with adults she has never met. These are skills that are hard to learn in a classroom.

Volunteering can also help young people discover what they want to do in the future. A student who reads picture books to children at a library might realize that she enjoys teaching. Experiences like this can guide students when they choose a career.

Thus, volunteer work is not a one-way gift. When we help others, we also help ourselves grow. Students who are looking for new experiences should consider volunteering in their communities.

次の英文（**“The Power of Reading Aloud”**）を読んで、あとの問いに答えなさい。

Most students read English silently. They move their eyes across the page and try to understand the meaning. This is an important skill, but there is another way of reading that is often forgotten: reading aloud.

Reading aloud helps learners in several ways. First, it makes them pay attention to the sounds of words and the rhythm of sentences. Second, saying sentences out loud many times helps them remember useful expressions. As a result, many learners find it easier to speak and listen.

However, reading aloud is not effective if learners do not understand what they are reading. Simply making sounds without thinking about the meaning does not help much. Learners should first understand the text and then read it aloud.

In conclusion, reading aloud is a simple but powerful way to improve English. If learners understand a text first and then read it aloud again and again, they can build skills that silent reading alone cannot give them.

次の英文（**“Why Boredom Can Be Good for Us”**）を読んで、あとの問いに答えなさい。

Most of us try hard to avoid boredom. When we have a few free minutes, we take out our phones and look for something to watch or read. Being bored feels like a waste of time, so we fill every empty moment. But is boredom really something we should run away from?

Some people say that boredom actually helps us think in new ways. When there is nothing to hold our attention, our minds begin to wander. We start to remember past events, imagine the future, and connect ideas that seem unrelated. For example, many people say they get their best ideas while taking a shower or waiting for a bus, moments when they have nothing else to do.

However, this does not mean that all boredom is useful. If a student feels bored in every class for months, it may be a sign that something needs to change. Long-lasting boredom can lower our motivation and make us feel unhappy.

In short, a little boredom is not our enemy. Instead of reaching for our phones every time we have nothing to do, we can sometimes let our minds wander. Those quiet moments may give us the space we need to think creatively.

次の英文（**“The Bicycle: A Small Answer to Big Problems”**）を読んで、あとの問いに答えなさい。

Every morning, roads in many cities are full of cars. Traffic jams waste people's time, and the exhaust from cars makes the air dirty. City governments are looking for ways to solve these problems.

One simple solution is to encourage people to ride bicycles. Bicycles do not need fuel, so they do not produce exhaust. They also take up much less space than cars, so more people can travel on the same road. In addition, riding a bicycle is good exercise.

On the other hand, cycling in a city can be dangerous if there are no safe lanes for bicycles. Bad weather and long distances can also make cycling difficult. For these reasons, some people hesitate to choose bicycles.

Therefore, cities need to do more than simply tell people to ride bicycles. If they build safe bicycle lanes and places to park bicycles, more people will feel comfortable cycling. In this way, a small change in how we travel can help with big problems.

次の英文（**“Why Buy When You Can Borrow?”**）を読んで、あとの問いに答えなさい。

Think about the things in your home that you rarely use. Many families own a drill, a tent, or a large cooking pot that they use only once or twice a year. These items take up space and cost money, but most of the time they just sit in a closet.

Because of this, some communities have started "libraries of things." Like a book library, these places lend items to members for a short time. For example, a family that wants to go camping can borrow a tent instead of buying one.

Sharing items in this way has several benefits. People save money and space at home. Also, if fewer items are produced, fewer resources are used, which is better for the environment.

To sum up, we do not always need to own everything we use. By borrowing and sharing, we can live more simply and protect the environment at the same time.
