次の資料（**“Refill Stations at Hillside High”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by the Hillside High School Student Council

In April, the student council installed three water refill stations in the school building, hoping to reduce the number of plastic bottles thrown away at school. Before the stations were installed, the school's recycling bins collected about 2,400 bottles every month.

As the table shows, the number of bottles collected fell sharply in the first few months. By July, it had dropped to 1,200, half the level before the stations were installed. Our goal is to cut the number by 60 percent by the end of the year, and we are confident that we can reach it if more students bring their own bottles.

We also counted how often the stations were used. In July, the counters on the three stations recorded a total of 9,000 refills.

[Comment] by Ms. Grant, school cafeteria manager

I am glad that fewer bottles are being thrown away. However, I would like to point out that the cafeteria also sold fewer bottled drinks in October, when many students were away on school trips. So part of the drop in October may not be due to the refill stations. Still, the stations are clearly popular, and I think the school should add one more station near the gym, where students line up for water after club practice.

Hillside High School のペットボトル回収本数と給水回数（月ごと・架空の資料）

次の資料（**“Screen Time and Sleep”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Article] by Riko Sato, Northfield High School Newspaper

Last month, the health committee at Northfield High School asked all 400 students how they use their phones at night. The survey asked how many hours students spent looking at screens after 9 p.m., how long they usually slept, and whether they often felt sleepy in class. The results are shown in the table.

The pattern is easy to see. Students who spent less than one hour on screens after 9 p.m. slept an average of 7.2 hours, while those who spent three hours or more slept only 5.6 hours. In addition, 70 percent of the students in the heaviest group said they often felt sleepy in class.

The committee believes that the school should start a "Phones Off by 10" campaign. "If students put their phones away earlier, they will sleep longer and do better at school," said the committee leader.

[Comment] by Mr. Ellis, biology teacher

The survey results are worth taking seriously, but we should be careful about what they actually prove. The table shows that students who use screens late also sleep less. It does not show that screens are the cause. Some students may stay up late because they have club activities, part-time jobs, or a lot of homework, and they may simply use their phones while they are already awake. A campaign might help, but I think we should first find out why students go to bed late. In my opinion, a second survey that asks about homework and other activities would give us a clearer picture.

Northfield High School 全生徒400人の調査結果（架空の資料）

Screen time after 9 p.m.	Number of students	Average sleep (hours)	Often sleepy in class (%)

次の資料（**“The Future of the Ridge Line”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Letter] by Ken Mori, a resident of Maple Valley

The Ridge Line has connected our valley to the city for more than seventy years. Now the railway company says it may close the line because too few people use it. As the table shows, the average number of passengers per day has fallen from 1,200 in 2000 to 480 in 2020.

However, numbers alone do not tell the whole story. Many of the remaining passengers are high school students and elderly people who cannot drive. For them, the train is not a convenience but a necessity. If the line closes, some families may leave the valley, and the population will fall even faster.

I believe the town should help the railway company keep the line open, for example by paying part of its costs.

[Comment] by Ms. Hara, Maple Valley town planning office

I understand how much the Ridge Line means to residents. However, the line's annual loss has more than doubled since 2000, and the town's budget is limited. Instead of paying for a train that carries fewer people every year, the town could run a bus service that stops closer to homes, the hospital, and the high school. A bus would cost far less to operate. Of course, before making any decision, we must listen carefully to the students and older residents who depend on the line.

Ridge Line の利用者・赤字と Maple Valley の人口（架空の資料）

Year	Average passengers per day	Annual loss of the line (million yen)	Population of the valley
2000	1,200	80	15,000

次の資料（**“The Riverside Farmers' Market”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by Lisa Chen, market organizer

The Riverside Farmers' Market opened in April last year in the parking lot next to the station. Every Saturday morning, about twenty local farmers sell vegetables, fruit, eggs, and bread directly to customers. In its first year, the market became a popular weekend spot for families.

The table shows the average number of visitors and the average total sales per Saturday in four months of last year. Visitors increased steadily from spring to autumn, and in October the market attracted 1,500 people a day. We plan to open the market on Sunday mornings as well from next spring. We believe that a second market day will bring even more people to the station area.

[Comment] by Tom Baker, owner of a grocery store on Station Street

I welcome anything that brings people to the station area, and the market has certainly done that. However, sales at my store on Saturday mornings have fallen by about 10 percent since the market opened, because some of my customers now buy their vegetables at the market. If the market opens on Sundays too, small shops like mine may suffer even more. I hope the organizers will consider ways for local shops to take part, such as giving us a few spaces in the market.

Riverside Farmers' Market の来場者数と売上（土曜日1日あたりの平均・架空の資料）

次の資料（**“The Future of the Ridge Line”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Letter] by Ken Mori, a resident of Maple Valley

The Ridge Line has connected our valley to the city for more than seventy years. Now the railway company says it may close the line because too few people use it. As the table shows, the average number of passengers per day has fallen from 1,200 in 2000 to 480 in 2020.

However, numbers alone do not tell the whole story. Many of the remaining passengers are high school students

and elderly people who cannot drive. For them, the train is not a convenience but a necessity. If the line closes, some families may leave the valley, and the population will fall even faster.
I believe the town should help the railway company keep the line open, for example by paying part of its costs.

[Comment] by Ms. Hara, Maple Valley town planning office
I understand how much the Ridge Line means to residents. However, the line's annual loss has more than doubled since 2000, and the town's budget is limited. Instead of paying for a train that carries fewer people every year, the town could run a bus service that stops closer to homes, the hospital, and the high school. A bus would cost far less to operate. Of course, before making any decision, we must listen carefully to the students and older residents who depend on the line.

Ridge Line の利用者・赤字と Maple Valley の人口（架空の資料）

Year	Average passengers per day	Annual loss of the line (million yen)	Population of the valley
2000	1,200	80	15,000
2010	800	120	13,000
2020	480	180	11,000

記事に対する Ms. Hara の立場を説明したものとして最も適切なものを選びなさい。

概念理解　定義・公式の適用条件の確認

ア　Ms. Hara suggests replacing the train with a cheaper bus service, while Mr. Mori wants the town to help keep the line open.

イ　Mr. Mori thinks the line should close because few people use it.

ウ　Both of them want the line to be closed as soon as possible.

エ　Ms. Hara wants the town to pay for the train, while Mr. Mori prefers a bus service.

次の資料（**“Refill Stations at Hillside High”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by the Hillside High School Student Council
In April, the student council installed three water refill stations in the school building, hoping to reduce the number of plastic bottles thrown away at school. Before the stations were installed, the school's recycling bins collected about 2,400 bottles every month.
As the table shows, the number of bottles collected fell sharply in the first few months. By July, it had dropped to 1,200, half the level before the stations were installed. Our goal is to cut the number by 60 percent by the end of the year, and we are confident that we can reach it if more students bring their own bottles.
We also counted how often the stations were used. In July, the counters on the three stations recorded a total of 9,000 refills.

[Comment] by Ms. Grant, school cafeteria manager
I am glad that fewer bottles are being thrown away. However, I would like to point out that the cafeteria also sold fewer bottled drinks in October, when many students were away on school trips. So part of the drop in October may

not be due to the refill stations. Still, the stations are clearly popular, and I think the school should add one more station near the gym, where students line up for water after club practice.

Hillside High School のペットボトル回収本数と給水回数（月ごと・架空の資料）

次の資料（**“The Riverside Farmers' Market”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by Lisa Chen, market organizer

The Riverside Farmers' Market opened in April last year in the parking lot next to the station. Every Saturday morning, about twenty local farmers sell vegetables, fruit, eggs, and bread directly to customers. In its first year, the market became a popular weekend spot for families.

The table shows the average number of visitors and the average total sales per Saturday in four months of last year. Visitors increased steadily from spring to autumn, and in October the market attracted 1,500 people a day. We plan to open the market on Sunday mornings as well from next spring. We believe that a second market day will bring even more people to the station area.

[Comment] by Tom Baker, owner of a grocery store on Station Street

I welcome anything that brings people to the station area, and the market has certainly done that. However, sales at my store on Saturday mornings have fallen by about 10 percent since the market opened, because some of my customers now buy their vegetables at the market. If the market opens on Sundays too, small shops like mine may suffer even more. I hope the organizers will consider ways for local shops to take part, such as giving us a few spaces in the market.

次の資料（**“Longer Library Hours”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by Daniel Ross, head of the Greenwood City Library

Since September, the Greenwood City Library has stayed open until 9 p.m. on weekdays instead of closing at 6 p.m. We made this change after many working adults and high school students told us that they could not visit during the day.

To see whether the change was worthwhile, we counted weekday visitors in each time slot in October, the second month of the new hours, and compared the numbers with October of last year. The evening hours are already attracting more than 2,000 visitors a month. We think the longer hours have been a clear success, and we plan to continue them next year.

[Comment] by Ms. Park, library staff member

The evening hours are clearly popular. But when I look at the numbers, I notice that fewer people are coming during the day than last year. The total has increased by only 1,500 visitors, even though we are now open 15 more hours each week. It is possible that some people who used to come in the afternoon now simply come in the evening instead. Keeping the library open longer also means higher costs for staff and electricity. I suggest that we ask visitors when they would most like the library to be open before deciding about next year.

次の資料（**“Screen Time and Sleep”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Article] by Riko Sato, Northfield High School Newspaper

Last month, the health committee at Northfield High School asked all 400 students how they use their phones at night. The survey asked how many hours students spent looking at screens after 9 p.m., how long they usually slept, and whether they often felt sleepy in class. The results are shown in the table.

The pattern is easy to see. Students who spent less than one hour on screens after 9 p.m. slept an average of 7.2 hours, while those who spent three hours or more slept only 5.6 hours. In addition, 70 percent of the students in the heaviest group said they often felt sleepy in class.

The committee believes that the school should start a "Phones Off by 10" campaign. "If students put their phones away earlier, they will sleep longer and do better at school," said the committee leader.

[Comment] by Mr. Ellis, biology teacher

The survey results are worth taking seriously, but we should be careful about what they actually prove. The table shows that students who use screens late also sleep less. It does not show that screens are the cause. Some students may stay up late because they have club activities, part-time jobs, or a lot of homework, and they may simply use their phones while they are already awake. A campaign might help, but I think we should first find out why students go to bed late. In my opinion, a second survey that asks about homework and other activities would give us a clearer picture.

Northfield High School 全生徒400人の調査結果（架空の資料）

Screen time after 9 p.m.	Number of students	Average sleep (hours)	Often sleepy in class (%)

次の資料（**“The Future of the Ridge Line”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Letter] by Ken Mori, a resident of Maple Valley

The Ridge Line has connected our valley to the city for more than seventy years. Now the railway company says it may close the line because too few people use it. As the table shows, the average number of passengers per day has fallen from 1,200 in 2000 to 480 in 2020.

However, numbers alone do not tell the whole story. Many of the remaining passengers are high school students and elderly people who cannot drive. For them, the train is not a convenience but a necessity. If the line closes, some families may leave the valley, and the population will fall even faster.

I believe the town should help the railway company keep the line open, for example by paying part of its costs.

[Comment] by Ms. Hara, Maple Valley town planning office

I understand how much the Ridge Line means to residents. However, the line's annual loss has more than doubled since 2000, and the town's budget is limited. Instead of paying for a train that carries fewer people every year, the town could run a bus service that stops closer to homes, the hospital, and the high school. A bus would cost far less to operate. Of course, before making any decision, we must listen carefully to the students and older residents who depend on the line.

Ridge Line の利用者・赤字と Maple Valley の人口（架空の資料）

Year	Average passengers per day	Annual loss of the line (million yen)	Population of the valley
2000	1,200	80	15,000
2010	800	120	13,000
2020	480	180	11,000

次の資料（**“The Riverside Farmers' Market”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by Lisa Chen, market organizer

The Riverside Farmers' Market opened in April last year in the parking lot next to the station. Every Saturday morning, about twenty local farmers sell vegetables, fruit, eggs, and bread directly to customers. In its first year, the market became a popular weekend spot for families.

The table shows the average number of visitors and the average total sales per Saturday in four months of last year. Visitors increased steadily from spring to autumn, and in October the market attracted 1,500 people a day. We plan to open the market on Sunday mornings as well from next spring. We believe that a second market day will bring even more people to the station area.

[Comment] by Tom Baker, owner of a grocery store on Station Street

I welcome anything that brings people to the station area, and the market has certainly done that. However, sales at my store on Saturday mornings have fallen by about 10 percent since the market opened, because some of my customers now buy their vegetables at the market. If the market opens on Sundays too, small shops like mine may suffer even more. I hope the organizers will consider ways for local shops to take part, such as giving us a few spaces in the market.

次の資料（**“Screen Time and Sleep”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Article] by Riko Sato, Northfield High School Newspaper

Last month, the health committee at Northfield High School asked all 400 students how they use their phones at night. The survey asked how many hours students spent looking at screens after 9 p.m., how long they usually slept, and whether they often felt sleepy in class. The results are shown in the table.

The pattern is easy to see. Students who spent less than one hour on screens after 9 p.m. slept an average of 7.2 hours, while those who spent three hours or more slept only 5.6 hours. In addition, 70 percent of the students in the heaviest group said they often felt sleepy in class.

The committee believes that the school should start a "Phones Off by 10" campaign. "If students put their phones away earlier, they will sleep longer and do better at school," said the committee leader.

[Comment] by Mr. Ellis, biology teacher

The survey results are worth taking seriously, but we should be careful about what they actually prove. The table shows that students who use screens late also sleep less. It does not show that screens are the cause. Some students may stay up late because they have club activities, part-time jobs, or a lot of homework, and they may simply use their phones while they are already awake. A campaign might help, but I think we should first find out why students go to bed late. In my opinion, a second survey that asks about homework and other activities would give us a clearer picture.

Northfield High School 全生徒400人の調査結果（架空の資料）

Screen time after 9 p.m.	Number of students	Average sleep (hours)	Often sleepy in class (%)
Less than 1 hour	80	7.2	15
1–2 hours	150	6.7	32
2–3 hours	110	6.1	50
3 hours or more	60	5.6	70

次の資料（**“Longer Library Hours”**：記事・表・コメント）を読んで、あとの問いに答えなさい。

[Report] by Daniel Ross, head of the Greenwood City Library

Since September, the Greenwood City Library has stayed open until 9 p.m. on weekdays instead of closing at 6 p.m. We made this change after many working adults and high school students told us that they could not visit during the day.

To see whether the change was worthwhile, we counted weekday visitors in each time slot in October, the second

month of the new hours, and compared the numbers with October of last year. The evening hours are already attracting more than 2,000 visitors a month. We think the longer hours have been a clear success, and we plan to continue them next year.

[Comment] by Ms. Park, library staff member

The evening hours are clearly popular. But when I look at the numbers, I notice that fewer people are coming during the day than last year. The total has increased by only 1,500 visitors, even though we are now open 15 more hours each week. It is possible that some people who used to come in the afternoon now simply come in the evening instead. Keeping the library open longer also means higher costs for staff and electricity. I suggest that we ask visitors when they would most like the library to be open before deciding about next year.

Greenwood City Library の平日の時間帯別来館者数（10月・架空の資料）

Time slot (weekdays in October)	Last year (closed at 6 p.m.)	This year (open until 9 p.m.)
9 a.m.–12 p.m.	3,000	2,800
12 p.m.–3 p.m.	3,600	3,400
3 p.m.–6 p.m.	4,400	3,800
6 p.m.–9 p.m.	—	2,500
